

Secure Use of AI | **Integrate Knowledge** | **Deploy Agents** | **Automate Processes**

With SEMTUK, you implement AI not as a collection of individual tools, but as a central platform. You start simple and build your AI landscape step by step - securely, with full control and scalability. **You keep the freedom to choose technologies and providers at any time and make your business as independent as possible from individual providers and political decisions.**

Many AI solutions Do Not Equal an AI Strategy

A freelancer builds a chatbot. Another provider automates a process. Employees use different AI tools. Company knowledge is stored in multiple places.

Each individual solution may work. But with every additional application, complexity, cost, security risks, and dependencies continue to grow.

SEMTUK replaces this patchwork with a unified AI infrastructure.

SEMTUK – Your Complete AI Solution

1

Leading AI Models - without Being Locked In

SEMTUK gives you access to all leading AI models on a central platform. You decide which models you and your employees are allowed to use. You can switch models at any time without interrupting your applications. **Choose the hosting options that fit your requirements: international, Europe-only, Germany-only or self-hosted.**

2

Use AI Securely and Under Control

Employees receive centrally managed access to AI. **You define** which models are enabled, **how data must be anonymized and which compliance rules apply**. Company rules are applied to every request. No one needs to be an AI, data protection or prompt expert.

3 Your Company Knowledge Becomes a Strategic Asset

Product knowledge, processes, manuals, experiences, application know-how, and internal documents are stored in a central knowledge base and made available to employees and agents. Knowledge stays in your company, is available where it is needed, and is not used to train AI models. **AI models do not access the knowledge base directly.**

4 Build Your Digital Employees Directly on the Platform

Create specialized agents for service, sales, HR, marketing, internal knowledge and more. You decide what an agent knows, what it may do, how it communicates, and which rules it must follow. **Configuration is done in plain language - no programming required.**

5 When AI Alone is Not Enough: We Integrate AI Directly into Your Enterprise Software

Connect ERP, CRM and other enterprise systems individually with SEMTUK – even where standard interfaces are not available. SEMTUK combines AI for unstructured information with rule-based software for structured tasks requiring zero-error tolerance. SEMTUK is not only a provider of a highly secure AI platform, but also a German IT company with 40 years of experience in automation and business rule engines - the perfect partner for your complex solutions. **You get end-to-end automation instead of disconnected point solutions.**

Why SEMTUK?

AI Strategy instead of Point Solutions	Independence of Providers and Politics	Experienced German Techno-logy Partner	Scalable without Cost Explosion	Personal Implemen-tation Support

What Changes with SEMTUK?

> *For onboarding new employees, we now need only 20% of the time. After basic training, our internal knowledge agent is there to answer their questions - without taking our experienced employees away from their work.*

CSO, Measurement & Control Technology

> *Finally, I can enable AI in my company with a clear conscience. With SEMTUK, I understand what AI is doing. I can adjust the prompts myself at any time, and I am confident that our company data is fully protected.*

CEO, Mechanical Engineering

> *With our AI-assisted quotation process, our quotes reach the customer before our sales rep leaves the construction site. Decisions are made much faster - and we can often close the deal right on the spot.*

Owner, Construction Industry

Start today. Grow tomorrow. Stay independent. SEMTUK.AI
